## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 is dependent on non-existent claim 18.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 2, and 6-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Tang et al (6,507,064). The reference to Tang appears to show all of the structural features of the invention. For example, as shown in Fig. 9 of Tang, there is formed a semiconductor wafer having doped areas (not shown in the Figure) contact pads(34) and (38) which are coupled to the doped areas, a digit line contact plug (62) with an upper surface farther away from the substrate than the lower surface which contacts

Art Unit: 2815

contact pad (38), and a capacitor storage node (82) with a lower surface and an upper surface and where the upper surface is at least as far from the substrate as the digit line contact plug. In addition, tang shows a second contact plug (106) which contacts the upper surface of the first contact plug, and is interposed between the first and second capacitor top plates (94). This second contact plug also has a conductive runner (104) over the first and second capacitor storage plates.

With regard to the recitation of a spacer (claim 12) which insulates the capacitor top plate from the second portion of the digit line contact, the part of the insulating layer (102) which is positioned between the top plate (94 ) and the second portion of the digit line contact (106), would meet this limitation.

The applied reference has a common Assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.
